Golf Tournaments Website Project

Website Name: Golf Tournaments Hub

Description: This website will focus on golf tournaments, offering visitors a central hub for information, results, and interactive features. Users can browse upcoming tournaments, view past winners, and enjoy highlights in a clean, structured format. The website will include a section for creating custom golfers and tournaments, letting users experiment with their own data. JavaScript will add interactivity, such as slideshows, tab navigation, and form validation. On the backend, tournament and golfer data will be stored so that users can create, edit, and delete entries, making the experience persistent and engaging.

Page Names:
- Home
- Tournaments
- Create Golfer
- Create Tournament
- About Us

Data Storage, Manipulation, and Viewing: The website will store data about golfers and tournaments. For golfers, we will store their name, age, handicap, and nationality. For tournaments, we will store the name, date, location, participating golfers, and scores. Users will be able to create new golfers and tournaments through interactive forms, with JavaScript validation to ensure accuracy. All data will be stored in a server-side database, with the ability to add, edit, and delete entries. Administrators will manage tournament results, while regular users can create and customize their own golfers and events.
